

Proposal: Integrating AI the Small Business Way

Project Overview

This project initiates the creation of an AI Integration Guide tailored for small non-profits. The first deliverable will be a simple infographic paired with an audio overview. The goal is to provide relevant, actionable information that cuts through the noise and helps small organizations implement AI in manageable, step-by-step ways. Unlike many AI resources that focus on profitability and enterprise-scale solutions, this guide emphasizes freeing up resources for mission-driven work. This project is a foundational step toward a larger vision: a comprehensive guide to AI integration for non-profits.

Selected AI Modalities & Integration Plan

AI Modalities

- **Text Generation** – ChatGPT will be used to synthesize research and generate concise, actionable steps.
- **Text-to-Image** – Tools like Nano Banana or Piktochart will be used to create infographics and supporting visuals.
- **Audio Generation** – A short podcast-style audio summary will be created using an AI voice tool (e.g., ElevenLabs, Descript, or similar).

Integration Plan

- Conduct research on how small businesses and non-profits can use AI for simple, repetitive tasks.
- Use ChatGPT to distill this research into 3–5 actionable steps.
- Design an infographic using text-to-image tools that visually presents these steps.
- Generate additional illustrations as needed to enhance clarity and engagement.
- Create a short audio episode summarizing the infographic content in a conversational tone, linked at the top of the infographic for accessibility.

Objectives & Expected Outcomes

- **Demonstrate Creative Integration** of multiple AI modalities into a single cohesive artifact.
- **Prototype a Resource** that can later be expanded into a full AI Integration Guide for Non-Profits.
- **Explore Accessibility** by offering both visual and auditory formats for different learning preferences.

Final Deliverable

A single **image or PDF infographic** that includes:

- Actionable AI implementation steps
- Supporting visuals
- A link to a short podcast-style audio summary

Timeline & Milestones

Week 1:

- Conduct research and generate core text using ChatGPT
- Begin designing infographic and sourcing images

Week 2:

- Finalize infographic design
- Generate audio summary
- Integrate all components into final deliverable (PDF with embedded or linked audio)

Required Tools & Resources

- **ChatGPT** – for text generation and synthesis
- **Nano Banana / Piktochart / Canva** – for infographic and image creation
- **Audio Generation Tool** – such as ElevenLabs, Descript, or Podcastle
- **Research Sources** – articles, case studies, and examples of small business AI use
